

MySSP Onboard

Simple, Secure Certificate Delivery for BYOD

MySSP Onboarding provides a straightforward, effective, and fully customisable service to deliver certificates seamlessly to your BYOD users' devices. It ensures staff and students can connect to a secure and monitored network quickly, without unnecessary technical barriers.

MySSP Onboard Highlights:

- Simple certificate onboarding for BYOD
- Full support for all major operating systems and devices, including Android 14+
- Customisable landing page branded for your organisation
- Backed by Switchshop's 24x7 Service Desk

Effortless Device Onboarding

With support for all major devices and operating systems, MySSP Onboarding ensures users of every ability can onboard certificates without difficulty. Automatic detection of both device type and operating system simplifies the process, reducing IT support queues.

Users can self-manage onboarding for new devices or upgrades, maintaining network security without relying heavily on technical staff.

Effortless Device Onboarding

Host the certificate portal on a URL using your organisation's domain for a seamless and trusted user experience. Education providers can share a clear, branded link with staff, governors, and parents – helping meet safeguarding requirements.

🔗 Example: <https://certificate.switchshop.co.uk/KCSIE>

This recognisable URL makes certificate distribution simple and supports compliance with KCSIE (Keeping Children Safe in Education).

Part of the MySSP Suite

MySSP Onboarding forms part of the My Switchshop Security Provider (MySSP) suite of services and applications, delivering enterprise-grade security, safeguarding intelligence, and streamlined connectivity.
