

RepLog

Reporting, Logging & AI Safeguarding as a Service

What is RepLog?

RepLog removes the complexity and cost of running on-premises reporting and logging tools. Delivered as a secure, cloud-hosted subscription service, it provides detailed internet usage reports, real-time safeguarding alerts, and now full visibility of generative AI interactions, all delivered to nominated staff through the Switchshop customer portal.

As a member of the Internet Watch Foundation, and with the flexibility to add Switchshop curated and customer-defined keywords, RepLog delivers up-to-date, dynamic keyword reporting to help protect your users across search, AI prompts, video platforms, and high-risk website visits.

Exclusively for Fortinet firewall customers, RepLog is powered by Fortinet's App Control and supported by Switchshop's Expert Engage Partner knowledge, including ETSP and EPSP accreditations, to provide a comprehensive, accurate, and compliant safeguarding service.

Cloud-Hosted Reporting, Safeguarding & AI Monitoring for Fortinet Users

RepLog is the ideal solution for FortiGate firewall users who need detailed reporting, logging, and safeguarding intelligence. Powered by Fortinet's App Control, a significantly more powerful detection layer than web filter alone, it works entirely within your existing firewall infrastructure with no additional hardware or management overhead required. RepLog helps maintain full visibility of user traffic including generative AI interactions, supports safeguarding initiatives, and ensures compliance with legislation such as Keeping Children Safe in Education and Prevent. It can also be configured to meet your own internal safeguarding policies.

Key Benefits

No on-premises infrastructure: fully managed and cloud-hosted, removing the cost and complexity of running your own reporting tools

Complete AI prompt visibility: real-time monitoring of generative AI interactions across the platforms students use every day, treated with the same safeguarding rigour as search

Broader search and video coverage: expanded detection across major search engines, YouTube, and Vimeo, capturing what students are searching for and watching, not just the sites they visit

Proactive safeguarding alerts: real-time notifications to nominated safeguarding officers the moment concerning activity is detected, including high-risk website visits across sensitive categories

Comprehensive safeguarding and network threat reporting: including a consolidated weekly overview of high-risk and safeguarding-related website activity for nominated safeguarding officers, a weekly network threat report for your IT team, and user-specific reports detailing websites visited and keyword searches, delivered as required

Customisable reporting: up to two additional bespoke reports can be specified at the start of the service, tailored to present log data in a format that works for your organisation, with further bespoke reports available on request*

KCSIE and Prevent aligned: supports statutory safeguarding compliance for UK schools and public sector organisations

Scales with your organisation: subscription-based and hardware-free, RepLog grows with your network without additional infrastructure investment

Enterprise-grade detection: powered by Fortinet's App Control, working entirely within your existing firewall with no additional management overhead

Full local IT control retained: all policies applied through your current infrastructure, with optional fully managed service available

Backed by award-winning Fortinet expertise: delivered by Switchshop, the UK's first ETSP and EPSP accredited partner.

*Additional bespoke reports are chargeable. Please speak to your account manager for further information.

Service Levels

Additional bespoke reports are chargeable. Please speak to your account manager for further information. Fully managed service configuration is available at an additional cost. Contact your account manager to discuss.
